TESTIMONIAL

Profile:

Dr. Murali Krishna, is a reputed Prosthodontist in Vijayawada. He completed his BDS from Govt. Dental College, Hyderabad. and his M.D.S from C.O.D.S, Manipal Academy of Higher Education(MAHE), Manipal in 2000 in Speciality Prosthodontia. He has been running a Dental lab with full fledged CAD/CAM facilities for over a decade now. Dr.Murali Krishna is passionate about Digital Dentistry and conducts training programs on latest techniques.

About STRATADENT 4D:

Says Dr. Murali Krishna, " I have evaluated Stratadent 4D in my dental lab over several days and I am pleased with the results. Stratadent 4D is compact, silent and user friendly. It is an open system which can accept scanned images from any desktop or intra oral scanner. We milled copings, crowns and bridges on wax and zirconia and the output was found to fit onto the models excellently. The machine requires 6 bar of pneumatic pressure for tool change and 50 lpm for spindle air purge. Stratadent 4D is a fine product that has been indigenously designed and manufactured in India by Strategi Automation Solutions Pvt. Ltd. The machine is aesthetically pleasing and the fit and finish is excellent. I have requested Strategi to make the door bigger for easier loading and unloading of the discs. The machining times of the copings and crowns were around 7 mins and 14 mins respectively. The company is 21 years old and has an excellent reputation in the market for quick customer service. Strategi can offer the entire dental chain which includes a scanner and furnace of the customer's choice. I heartily recommend Stratadent 4D to Dental Labs and Prothodontists who wish to have in-clinic machines."
